**PRICING SUBJECT TO CHANGE**

# TERMINAL SITE REQUIREMENTS

## EXISTING PHONE LINES ARE USUALLY COMPATIBLE WITH VERIFONE EQUIPMENT.

To ensure proper functioning of your Verifone terminal, your phone equipment must meet the following requirements:

1. If your store has one phone line for the terminal and you do not have a "call-waiting" feature, no adjustments are generally needed.
2. There must be a phone line jack and electrical outlet within 6 feet of the terminal.
3. An RJ11 modular jack (standard "clip" phone jack) is needed.
4. A standard touch-tone or rotary voice (ANALOG) line is required. The Verifone terminal will not work on a digital line.
5. The terminal phone line cannot support a "call-waiting" feature.
  - a. If your store line has this feature, contact your local phone service company to learn if this service can be temporarily disconnected while the terminal is in use.
  - b. If a disconnection code is unavailable in your area, the "call-waiting" feature will need to be disconnected or else a separate phone line will need to be installed.
6. If your store has multiple lines on a roll-over system, one of these lines will need to be isolated or designated for the Verifone terminal. This can be done by installing an isolation or toggle switch. It is generally best to have this switch installed on the last line of the roll-over system. (Contact your phone service provider for the toggle switch.)
7. Your line voltage must be between 25 and 48 volts.
8. The terminal is a standard 4-wire system (tip, ring/A & A1 lead).

**NOTE:** Your store cannot utilize the Private Label Program until the phone lines are compatible with the Verifone equipment.

If you have any questions or concerns about the compatibility of your phone system, please call us at **1-800-333-1082**, or contact your local phone service company.
